1. What is the topic that you have finalized? (Answer in 1 or 2 sentences)

Title: "The Bird Census: How much do we know about birds?"

A quiz game, where the user guesses the answer to a bird related question. Then, the answer will be presented in a pie-chart format OR bar chart, with the users' response highlighted in the chart if applicable. This interactive webpage will showcase the beauty of birds in Singapore and dispel the myth that birds are terrifying nuisances. Information presented can include the families (of species) found in singapore, and whether the birds are local/migrants.

2. What are the data sources that you have curated so far? (Answer 1 or 2 sentences).

The Singapore Bird Checklist. It is available as an excel sheet (will include in the Github week 9 folder), and I found an API of it on Github but I am unsure which would be better to use.
